## Generating Energy and Innovation with the Detroit Windmill Microgrid

- **Carlos Nielbock** and **Ika Danielson**, C.A.N. Art Handworks Inc., Detroit, Michigan
- **Christopher Pannier** (team lead) and **Paul Draus**, The University of Michigan-Dearborn

The goal of this project is to optimize the design of a low-altitude wind-solar microgrid for application in underserved urban neighborhoods. The project will integrate custom-crafted microgrids in community contexts through local partnerships that provide workforce development and youth green energy education while also addressing energy gaps based in legacies of racial segregation in Detroit.
