Americans who share a parking area with neighbors are in the majority. They skew towards lower home values & incomes yet cannot charge an EV where they live. Their choices are forego electric vehicles or rely on inconvenient public charging (where available).

Bringing home EV charging to these would-be EV owners requires dual expertise in implementing inclusive public policies to match consumer needs with innovative products. OmniPotential has traction on both fronts with successful statewide legislation & our Curbstar EV charging platform, the only such product designed for shared, curbside, residential use.
