

## Goals

We aim to facilitate the appliances upgrade for neighborhoods in poverty, poor air quality, housing burden, with less education resources and linguistic isolation:

- Coordinate with the disadvantaged community to understand the status of the installed residential appliances.
- Conduct field testing on appliances efficiency and indoor air quality in disadvantaged community homes.
- Work with local gas and electric utility companies and government agencies on appliances upgrade.
- Invite K-12 children from the disadvantaged neighborhood to visit UC Irvine’s renewable energy research facilities.
- Establish long term education programs at disadvantaged neighborhood K-12 schools.
