What is clean air worth? On the known island of enchantment where the most fruitful potential farms reside in the U.S., we have decided as a group of collective innovative creators to give back to our family, friends, and the wonderful community of Puerto Rico. Year after year natural disasters come and go, much like hurricane Maria that left many people tired of how to reinvent going about their daily routines without major essentials like electricity and food availability. Many citizens of Puerto Rico felt the negative effects of being without certain foods for long periods of time due to dependency on imported production. Utilizing a combination of some of the most cutting-edge advancements in technology and research, we have come up with a way to build up the community as well as manage it with clean energy and solar powered electricity. With acquiring our 26 acres of abandoned land, our objective is to educate, while allowing the actual process of building a better environmental system to be on display. We will dedicate no less than 2 acres to a commercial wind farm and another minimum of 5 acres to a high quality commercial solar panel field. Acres will be allocated to farmland powered by the said natural renewable clean commercial plant created. In creating this project, we will be able to provide jobs, essential goods, and generate revenue throughout the year before, during, and after the project is complete. Already supporting this project are solar experts at SunSol represented by Frank Alemany, one of the main food distributors on the island Liliana Rodriquez with Liana Foods INC., and natural energy professionals representing Pavegen Kinetics. Hurricane Maria damaged key transportation, communication, and electricity infrastructures across the island, which in exchange plummeted already challenged health conditions in the communities. Damages done to the island gave it a new record of being the largest longest black out in American history. For communities to get back to normal it took a substantial amount of time, due to limited funding. As the economy started slowly correcting itself, the covid pandemic hit and the rest is present history. We are working with an abundance of business supporters of many different industries to enhance and boost the funds available to make such an important change, drastically helping the mental and physical malnourished population of the island one farm at a time.
