Agriculture and Technology Facility

Maintain

Sustain

### The Cycle of Fresco Air:

- The sun will power solar panel field.
- The solar panel field will generate electricity to sustain the entire project plus the neighborhood of 10-20 occupied houses within the area.
- The farm will harvest and produce for schools and/or daycare programs, hospital, etc.
- Between our organization, volunteers, sponsors, partner donors, and the community we will maintain the agricultural growth and increase food manufacturing within the island.
- Within the community will grow the knowledge and usage of solar and other clean energy systems to maintain

- Power grows  $x^3$  as wind speed grows
- Increases wind speed by 40% on average
- 3x increase in power vs a regular turbine
