

**Energy, Environment and Education:
Integrated EEE Design for Underserved Populations**

Team Name: EEEDIFYING_UP

Description

Project describes the design and implementation of a technological, communal and agricultural training program for sustainable development in underrepresented populations. The women-led team made up of undergraduate students in the field of Mechanical Engineering propose an integrated approach towards sustainable development by placing the tools and knowledge in communities' hands rather than perpetuating charitable measures that do not address long-term reconstruction efforts.
