

Energy Innovators Program

The Energy Innovators Program aims to build relationships with and connect diverse talent across Baltimore to industry partners affiliated with the National Offshore Wind Research and Development Consortium and host researchers affiliated with the University System of Maryland and Johns Hopkins University ROSEI. The program will consist of a cohort-based summer research program with two tracks:

Energy Innovators Scholars

High school level participants will participate in the **Scholars Track**. This would provide access to the ROSEI Sustainable Engineering Education pre-college summer courses in addition to an Energy Innovators research project and mentor.

Energy Innovators Fellows

College-level participants will participate in the **Fellows Track**. This would provide access to comprehensive experiential learning in hard, soft and professional development skills useful to the clean energy and offshore wind industries in addition to an Energy Innovators research project and mentor.
