

# CALWAVE was founded on the idea that wave energy will help drive an equitable and global energy transition.

CalWave's overall **vision** is to reverse climate change and preserve global biodiversity through the renewable and sustainable power of ocean waves.

CalWave's **mission** is to bring superior wave technology to the market worldwide, empowering coastal communities to transition to a fully sustainable and reliable power supply.

## CalWave's Inclusive Energy Innovation Prize goals:

- Create or increase participation in clean energy and climate-smart job training and job placement/hiring
- Foster grassroots innovation related to just and equitable clean energy deployment
- Enable the development of replicable clean energy transitions

CalWave's technology has been operating uninterrupted at Scripps Institution of Oceanography since September 2021.

The CalWave team includes a social impact expert with over a decade of formal training and experience in developing institutional capacities to support disadvantaged communities.
