

# hey Kid...

## Community Practices and Smart-Energy Devices Connected with Purpose

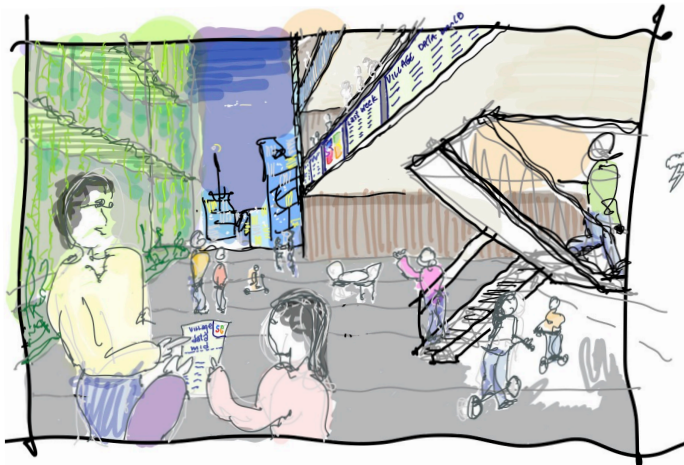

"hey Kid..." connecting communities and technologies to show how living in an energy-smart, socially-equitable, and innovative future can be enjoyably productive.

In rural farms and tech factories, we network immigrant and historical communities together.

In Chicago's tech sector and indoor food farms, we rebuild communities torn by violence with education and job training.

"hey Kid..." imagines a better future, told through today's disadvantaged communities. Bumping between technology and humanism, Kid uncovers a web of relationships and builds new things.

Game on cent.

### What Makes This Special:

Forty-two opportunities for matching disadvantaged communities with small-scaled, smart-energy technologies:

- 1.) support disadvantaged communities with new practices and/or equipment
- 2.) highlight bottom-up technology innovations
- 3.) distribute smart-energy solutions through networked communities

### Thematic Features:

- Smart-Energy Usage
- Local Innovation
- Networked Communities
- Continuous Education
