

Indigenous Resilience

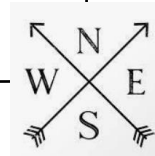

We seek to develop pathways for assisting tribes and tribal communities in their transitions to the use of clean energy that is supported, inspired and managed by those communities in keeping with their vision of cultural protection and sovereignty. Our mission is to increase the participation of indigenous communities in clean energy innovation, deployment and training. We look to combine our unique sets of experiences, networks and professional skills to assist Pacific Northwest tribes (i.e., Native American governments, entrepreneurs, educational/vocational programs, business, NGOs, wellness practitioners, and communities). Our submission outlines the details of how this work will be deployed, deliverables, and related experiences.

We thank you for your consideration.

Our [three minute video overview here](#), for your convenience.

Hi; I'm JD Williams and lead our team. With 25 years of experience in Indian law, my focus has been on non-gaming related economic development with an emphasis on energy, renewables, telecom and a wide variety of business activities all with tribes in the Pacific Northwest. I'm also a tribal judge and law professor. My practice has also focused on recruiting and mentoring Native American lawyers, clerks and others. As a judge, I've been involved in innovative tribal court development using restorative justice practices.

Hello; I'm Lisa Skube, team member. A responsive engagement architect, for over 25 years cultivating community design practices to elevate agency, efficacy, connection between people and place. Collaborative efforts have been at the core of this work with work products to aid communication and capacity for NGOs, business leaders, entrepreneurs, education/training tracks, revenue programs and learning exchange platforms guided by the communities they serve. Deep experience in EV mobility deployment, US – regional – local and global markets.
