

JEDI Solution

Goal: Get low income families to adopt solar.

Problem / Challenge: The cost structure for residential solar shows the small size residential solar payback time is too long. The current policy has a relatively negative impact on the low income community.

JEDI Solution – A new solar incentive and finance program enables reduced payback time for small projects that enable low income communities to adopt solar.

Team: JEDI

American Made Network Partners:

Team –

- Experienced researchers
- National Lab. experts
- America made network connectors and partners
- American Made Network and Clean Energy Business Network support
- Excellent innovation and implementation record, IEEE Fellow, Fellow of National Academy of Inventors, multiple National Award winners, R&D 100 Award...

The Set stage deliverables:

- Optimized payback model for low income community applications
- Draft policy/finance program for low income community
- Solicit input from AMN network, CEBN network and DOE

Planned work at the Go stage and beyond:

- Analyze the feedback from AMN, CEBN and DOE.
- Complete model analysis with revised payback model, ensure to meet JEDI goal Revise policy and program design.
- Solicit support from AMN network, CEBN network and DOE.
- Submit proposed policy changes to legislative personnel.
