

The Problem: Inverters for utility and commercial PV systems are one of the primary causes of system outages, maintenance costs, and lost revenue.

Our Solution: A novel combination of better controls with newer power electronics and older, high efficiency power devices to build a low cost inverter that uses natural cooling and a fully sealed design.

Our Team: Grid Edge Management Corporation includes university professors and industry professionals with a mission to commercialize technologies developed at NC State.

Our Product: The world's most reliable inverter.
