

The Suntraption

Solar energy harvesting stands precisely track with or without electricity

The Problem: Global Warming

Part of The solution: Harvesting Solar Energy With The Suntraption

The Suntraption is a two-part technology for harvesting solar energy with or without electricity. The stand, which can be fitted with all forms of solar conversion and solar concentration devices precisely and continuously faces objects to the sun. Moving this stand can be motorized, semi-manual using a patented fluid drive or manual.

The Suntraption puts precise tracking of all solar harvesting devices into the hands of the masses.
