

POP-UP SOLAR CANOPY

Bringing the power of the sun to film, television, and beyond, our solar canopy is the missing link in the entertainment industry's transition to net zero productions.

PROBLEM

22,000 off-grid film productions in Los Angeles alone in 2021

Average of 3,370 metric tons of CO2 per feature length film

77 metric tons of CO2 per 1hr of scripted TV

Electric batteries are starting to replace the gas generators used on set, however, their biggest limiting factor is recharging via the grid.

SOLUTION

Arrays of Pop-Up Solar Canopies that seamlessly integrate into the film production ecosystem

Universally adaptable

Modular and durable

Quick to deploy and easy to use
