

Project Feed Your Energy Needs with Sol-Food

Providing all walks of life with green, energy-efficient, solar-powered, flexible living and working spaces

Our solution to the world's unhealthy and environmentally unsustainable energy production is our plug-and-go solar generated electrical power system.

This systems is battery-based and comes with a charging station, handheld wireless control hub, and home automation sensors and controllers.

Our Plan to Make a Difference

We will address two major, global issues:

1. Unsustainable energy production
2. Rapidly increasing lack of affordable housing

How?

Through purchased abandoned, dilapidated homes, renovating them and installing our solar panels, and relisting them at affordable rates.

Power Storage
& Delivery
System**

How We're Different

- ✓ Fraction of the cost of traditional full-home solar conversion
- ✓ Isn't tied into the grid, providing power irrespective of grid conditions
- ✓ Portable & Scalable
- ✓ Numerous applications (single or multiroom, off grid homes & cabins, sporting/tailgating, and emergency backup)
- ✓ We recycle electric car batteries that typical go unused
