

What's in Your Green Town?

HBCU Community Development Action Coalition, through its Clean Energy Initiative (CEI) is reimagining Historically Black Colleges and Universities to become economic and social infrastructures, deeply woven into the fabric of the community, to promote clean energy-related education, job creation and workforce development. We do this by advancing programs that address food deserts, increase sustainability, and spur generational wealth.

In an aggressive approach to kick-start clean energy initiatives across the country, and in alignment with DOE's Justice40 Initiatives CEI plans to introduce its HBCU Green Town Project through the deployment of innovative solar appliances such as the SmartFlower, starting with three HBCU's in South Carolina and New Orleans, LA.

TRANSFORMING CAMPUSES AND COMMUNITIES
