

Equitable Green Transitions

SAN DIEGO PROBLEM

- Green transitions have thus far missed low-income households across the US, including in San Diego, California
- Soaring utility prices, extreme weather patterns, and higher cost of living in all sectors add to an already alarming rise in experience and risk of energy poverty

PROPOSED SOLUTIONS

- Building coalitions
- Conducting original research
- Learning with Justice40 communities
- Designing innovative programming
- Exploring novel financial solutions
- Ensuring that all San Diegans experience equitable green transitions
