

Community-led Energy Project Planning on Molokai

Coalition Members: **Ho‘āhu Energy Cooperative Molokai**, **Molokai Clean Energy Hui**, **Shake Energy Collaborative**

This project will formalize a co-design process through which community members can collaboratively design actionable energy transition plans that both integrate on the grid safely and align with local values. The co-design process (1) identifies and collects relevant geography-specific data, (2) develops translation tools to make existing grid modeling software a public tool, (3) develops simple add-on tools to weigh scenarios according to community values, (4) drafts installation plans for each co-design energy facility.

Status quo: Top down planning

Community-led design: Regenerative Planning
