

The Green Energy Justice Co-op

Mission - Create a just and sustainable energy future for all.

Strategy - We are a multi-class, multi-race, intergenerational, and inclusive gender movement, raising up leadership from frontline communities to build community owned energy.

What we do - Build grassroots-led and community owned solar projects that provide the energy we depend on as well as the jobs, enterprises, and new products and services we need.

What we've done - Formed our co-op, secured site options for 12 MW solar, submitted an application to the Illinois Power Agency for \$15M in renewable energy credits for these projects, borrowed \$70k to pay for these solar pre-development costs.
