

Innovative Energy & Sustainable Solutions

As a model green school district, ECS strives to implement energy efficient solutions, as well as practices that reduce consumption and promote sustainability, and provide educational opportunities for the entire community.

- **NEED**: By reinvesting in our facilities, while addressing current building deficiencies, ECS can remain a prototype district and green initiative leader that demonstrates how a 'Net Zero' emission goal is achieved, even in urban neighborhoods.
- **IMPACT**: Students interacting with high impact energy efficient improvements, as well as sustainable practices, will become environmental stewards who are equipped to solve pending problems in lower socio-economic communities.
- **ENERGY CHAMPIONS**: The ECS team is comprised of our Founder/ Director of Growth + Sustainability, as well 4 campus engineers and the Environmental Education Lead, who will oversee energy efficiency and conservation efforts at each school, while leading by example and encouraging students/staff to adopt more sustainable practices.
