

POWER TO THE PEOPLE

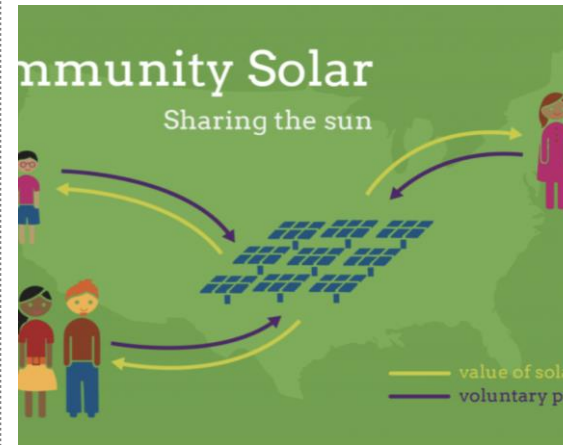

FIRST

Working with local cities, we will utilize abandoned lots in underserved neighborhoods to place each solar garden.

SECOND

We will combine existing solar technologies with our own technology currently in development. Our new technology will allow more solar energy to be captured in smaller spaces.

THIRD

Residents in the underserved neighborhood will have an opportunity to buy a subscription at a 25% discount to their current electric rate. We will also offer a free home efficiency survey and work with the subscriber to help reduce energy waste.

LAST but not least

- The subscriber will benefit from the 25% discounted rate**
- The neighborhood will benefit from less abandoned lots**
- The city will benefit from property tax income**
