

WHO WE ARE

We are a commercial & industrial solar development company primarily focused on community solar. We develop solar projects that use existing infrastructure and provide American businesses and families access to clean energy and savings on electricity – without the need to install solar panels on their own property.

OUR MISSION

To combat climate change by deploying solar projects that provide equitable access to clean energy and meaningful benefits to communities.

TEAM

25 YEARS COMBINED EXP.	110 CAREER PROJECTS	900 MW SOLAR CAPACITY EXP.	5 ACTIVE MARKETS
----------------------------------	-------------------------------	--------------------------------------	----------------------------

Patrick McNamara, *Managing Partner*

12+ years of experience in business development and project management; originated and/or developed 100+ MW of C&I scale projects in the solar energy sector.

WHAT WE DO

1. Project Development:

We design, develop and finance solar projects from concept to completion on commercial & industrial warehouse roofs, unused land, carports or public properties. We generate the most cost-effective solutions that comply with electrical/building codes, and local permitting agency requirements.

2. Community Engagement:

We work conscientiously to create unique, local community partnerships that provide economic and environmental benefits. We invest in connecting our projects to nearby neighborhoods and organizations by providing local high paying jobs, workforce training & development, educational programs, 10-20% on annual electricity cost savings, funding for local programs, etc.

The kind of community solar projects we develop:
