Company Values: What guides us

Impact: Why we care about community solar

Our planned community solar portfolio would provide the following estimated benefits:

~4000 MWh of clean energy produced annually, helping to power the clean energy transition

380+ Homes supplied with discounted electricity with priority given to low-to-moderate income households in disadvantaged communities within project proximity

1800 MTCO₂ emissions reduced annually, leading to cleaner air and helping to fight climate change

Local Workforce will be utilized in the construction and maintenance of the system, resulting in well-paying clean energy jobs for socially & economically disadvantaged individuals
