

Sun for Everyone!

Set an aggressive Community Solar Development Plan

Goal of 10 new 5 MW projects by 2025. 3 projects in pre-development

Assemble and organize skilled development team, provide training

Initiate Site selection and evaluation for project sites

Sites in or near Opportunity Zones and disadvantage communities

Submit for permits and utility, obtain approvals

Identify community organizations and financial aid groups

Build and train Workforce team

Start and complete construction

Commission the operation of the solar

Activate subscribers accounts

Distribute Electric Bill Credits and discounts to Subscribers

Collect from Subscribers for bill credits to result in cash flow!

Develop Expansion Model and Implement

Sun for Everyone!

Our teams' goal is building a way to efficiently expand Community Solar. We plan to make Community Solar easy. A program that works like any major successful franchise in the world.

As we develop our projects, we will create a process and pathway for success for someone to follow.

We plan on developing and implementing a “franchise” type model for community solar and introduce it to California.

It's a packaged business in a box. Every step and every detail worked out and developed as we go. Make it easy for someone to take it on in their neighborhood.

We set an aggressive goal of 10 Community Solar projects by 2025. We will encourage and help other developers to do the same.

Thank you for reviewing our ideas.
