

# Cost-Effective Solution to High-Clearance Solar

There are 650 million acres of cattleland in the U.S. alone and no low cost, high-clearance, solar tracking solution to open that market. RUTE SUNTRACKER is a cattle-grade solution that uses less steel with a cable technology to achieve cost parity.

- SUNTRACKER's cable-stayed solution:
- Provides **9'+ clearance** to enable cattle grazing
  - Reduces steel use by **25%** vs conventional solar
  - Tracks the sun for up to **24% more energy** gain than fixed
  - Requires **no grading**, with <0.5% land disturbance
