Team location:

WindSim Power

Attn: Donna Rennemo

2945 Townsgate Road, Ste 200

Westlake Village, California, USA 91361-5866

Commercial forecasting services:

WindSim Power offers software services which utilize high spatial resolution of wind, solar and other environmental variables and applies environmental models to develop analytic applications for the electric utility industry. For example, WindSim Power's flagship product is a commercial forecast software system that estimates dynamic line ratings which characterize the electric carrying capacity of overhead transmission lines.
