
Maveena Summary Slide: Net Load Forecasting (2023-03-05)

Basic Info:

- Team Members: Jonathan Kim & Nayeni Kokkodan.
- We come from both a data science and electrical engineering background.
- Our team is based out of TX, and we don't currently offer load forecasting services.

Approach:

- We plan to use a data-driven approach using machine/deep learning techniques to forecast net loads.
- Our approach may incorporate different models to account for different strengths, and will likely use additional datasets from external sources.
