Storyboard Title, Sequence, & Description Storyboard Title:

this test scenario allows a user(s) to test equipment and procedure for movement/transportation during the emergency situation such as loss of consciousness of one of the crew member.

Sequence and Description:

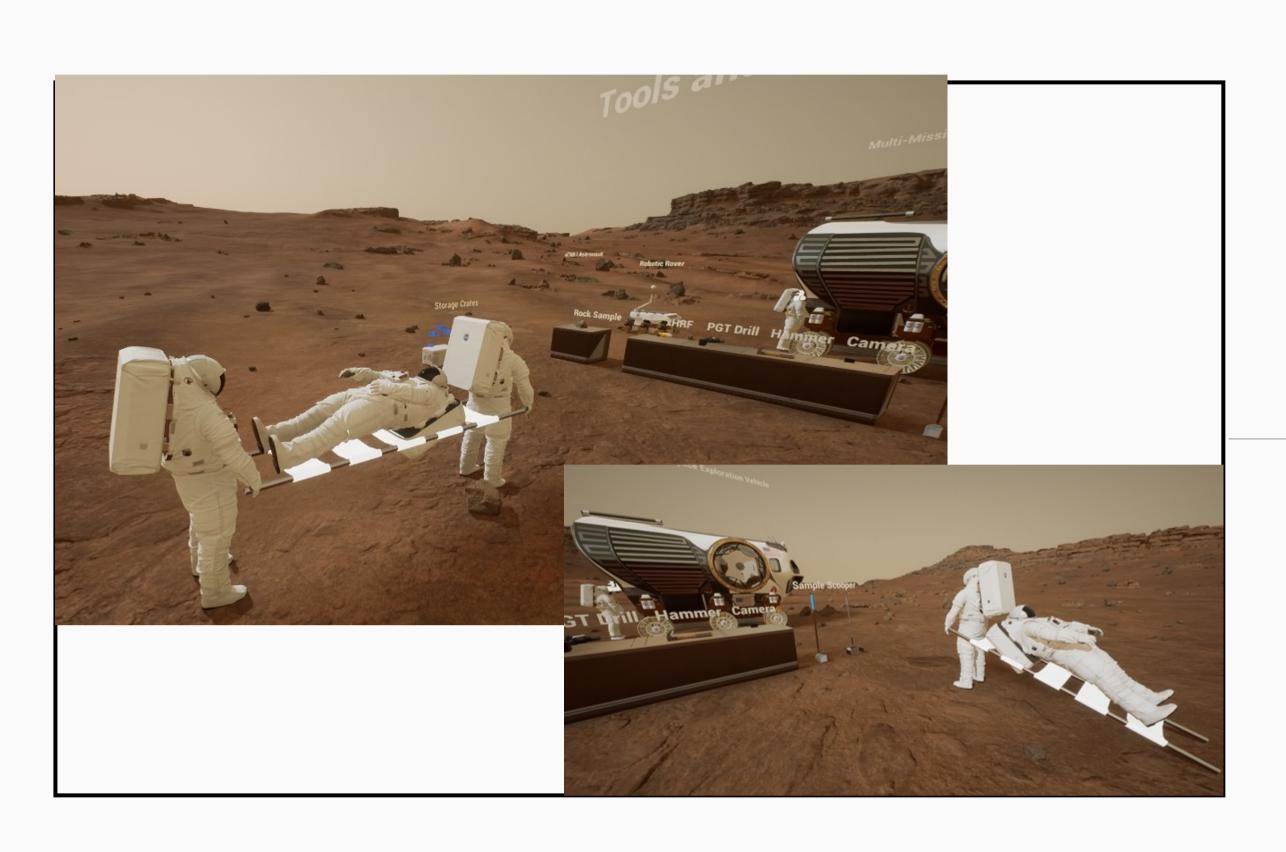

While performing any of the tasks for example such as "Retrieve cosmic radiation dosimeters from storage and deploy them nearby. Measure radiation and record the results. Once completed, return the dosimeters to storage" one of the crew members is loosing the conscious. Another member or two will have to take the stretcher from the vehicle for carrying the unconscious member (stretcher is needed to prevent the damage of the suit while carriage). Transport the member to vehicle, attach the stretcher back to fastener location and provide medical assistance or transport the member to place where assistance can be provided

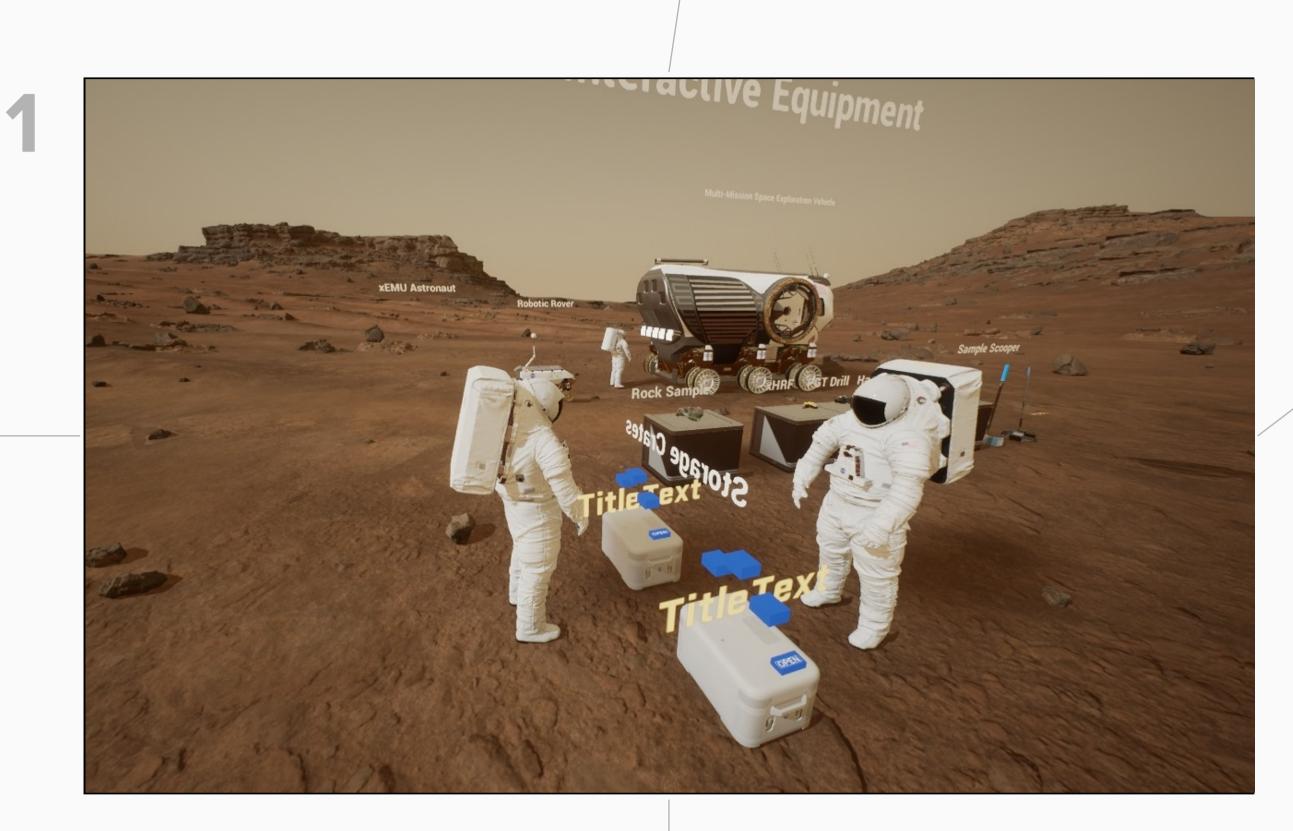

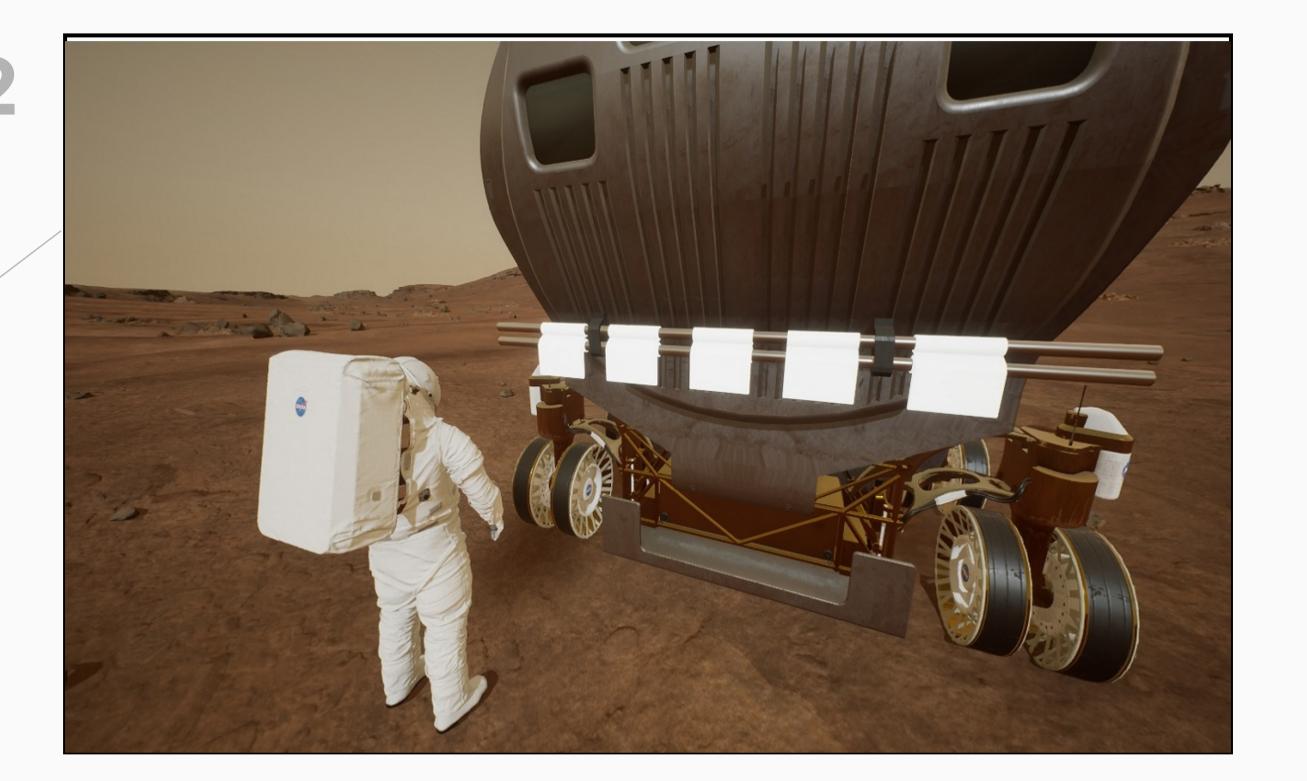

Assets Available in this Storyboard

- stretcher
- stretcher mount/fastener
- vehicle
- any set of tools that crew member can be occupied with while loosing consciousness. Dosimeter storage and dosimeter are pointed out just for correspondence with "storyboard title, sequence and description" section
