

Energizing Rural Communities Prize

2MK Solutions Partnership Plan

PASSIVE HOME RETROFIT TEXAS

Our mission is to bridge the gap between disadvantaged communities, local credit unions, and certified passive home builders and verifiers. Our plan will enable disadvantage communities and retrofit their homes through passive sustainable housing improvements. The funding would be approved by the Department of Energy and improvements would be paid back by the homeowners through the local Utility Provider from the savings the improvements generates. Once the cost are paid, the homeowner will benefit from a lower utility bill and a home that require 90% less energy to operate resulting in cost savings for the family and the power grid.
