

The Ariston Project

Reducing greenhouse gas emissions requires a comprehensive plan that can be developed to address various aspects, including marketing, marketing channels and tactics, collaboration with regional partners, community resilience, and energy efficiency.

The plan would involve conducting comprehensive market research, creating targeted advertising campaigns, and organizing community outreach initiatives. Establishing a local presence, partnering with relevant organizations, and accessing additional resources through collaborations would be prioritized.

Community resilience initiatives would focus on training programs, workshops, and cooperative farming projects, while energy efficiency efforts would include audits, financial incentives, and educational workshops. By implementing this plan, the aim would be to promote sustainable practices, encourage clean energy adoption, and enhance the overall well-being and resilience of Pittsboro, NC.

Goals

Eliminate 25% of Greenhouse Gas in Pittsboro, NC in 5 years
