

# CHURCHES GO GREEN

## Who We Are

Green Energy Innovations is a general contractor that specializes in solar panels, LED lighting, EV charging stations, and other energy technologies. We are partnering with Capay Assembly Church of God and multiple churches located in Orland, California.

## Our Mission

Our organization will target churches to engage rural communities and establish trust with outside services. We will renovate multiple churches with outdated energy technologies. Green Energy Innovations will serve as the aggregated engineering resource.

## Implementation

Green Energy Innovations will use awarded funds to 1) multiply the network of churches in Orland needing energy upgrades and 2) install energy upgrades on these buildings.

## Success and Replication

After establishing trust and significant energy savings in Orland churches, we will have the references and experience to replicate this partnership in other rural communities.
