

Interact Next Gen Prototype: Light the Way to #BuildingGoals

System Description

Signify is continuing to innovate its Interact connected lighting system, to make it easier for customers to adopt the technology and enjoy the benefits beyond illumination it has to offer. The Interact Next Gen system prototype is a simple, scalable wireless solution that provides businesses with all the tools and intelligence they need to go beyond basic energy-savings tactics. Interface with existing building system, drive down operational expenses, and improve occupant experience all with a single platform.

Intended Application

The Interact Next Gen prototype was designed to optimize savings and employee comfort in office environments.
