

ENERGY-AS-A-SERVICE (EAAS) SOLUTIONS

Building upgrade initiative

To prioritize energy management, efficiency, and integration of renewable energy sources to enhance building performance, retrofit and replace gas furnaces with ductless air-source heat pumps (ASHPs) that work alongside energy storage systems.

☑ Personalize communications and information building for cost-effective energy storage essentials and offer services and solutions directly targeted to that community's needs.

☑ Create community alliances, jobs for clean energy, climate-smart job training, job placement, and programs for social justice.

Achieving those objectives means community members who participated in our energy community engagement programs received vital resources that helped them understand how energy efficiencies and conservation contributes to a healthier environment and are cost-saving.
