

2

XeroHome™ uses public data, GIS maps and input from real estate agent to automatically create an energy model of the home.

1

Real Estate Agent collects data about the home during an on-site visit and inputs it into XeroHome via its web portal.

3

Home Buyer checks XeroHome's web portal and consults with real estate agent to select electrification measures best suited for their future home.

4

Mortgage Lender uses cost effectiveness calculations from XeroHome to offer an energy efficient mortgage with selected electrification measures.

Incorporating Electrification into Home Financing
- Team XeroHome
