HOME ENERGY 101

The Home Energy 101 program provides best practices to reduce energy usage and improve home comfort by finding the best areas for utility savings and efficiency improvements. This includes a walk-through with a home energy adviser that will identify needs and send up to **\$300 worth of FREE energy savings supplies to lower your utility bills.** Completing the program is one of the qualifications to apply for Home Energy Retrofit Program grants on projects like roof insulation or a home heating and cooling system.

NEIGHBORS EDUCATING NEIGHBORS

To extend access to our program, we have trained home energy advisers with organizations across Holland:

HOW IT WORKS

With this 60-90 minute visit, you will work with a home energy advisor to walkthrough your home to identify specific areas for improved energy performance, including opportunities to **reduce your energy bills and improve home comfort.** To fully understand your home and the opportunities to improve it, together you will:

- ✓ Review past utility bills to see how your home compares to others like yours in the area
- ✓ Identify opportunities for free energy saving supplies, which we'll mail to you after your session including (as needed):
 - LED light bulbs
 - Programmable thermostat
 - Pipe wrap
 - Caulk
 - Window insulation kit
 - Spray foam insulation
 - weather stripping
 - Duct, outlet and furnace seals
 - Infrared temp. sensor & plug-in power meter
- ✓ Review installation information on how to use your free energy saving supplies
- ✓ View thermal images of your home that show where insulation or sealing is needed
- ✓ Create an energy plan for your home
