Integrated Mechanical  
System Pod

Factory Built  
Carbon Neutral  
Building Envelope

231 Buildings  
1561 Apartments

Our team mission is to provide integrated whole building energy efficient and healthy retrofit solutions for 1-4 story apartment buildings. The Solution package includes: A factory built carbon neutral building envelope and heat pump driven integrated mechanical systems pods with smart monitoring systems. When paired and coordinated, the solution results in faster installation, minimized tenant and building owner disruptions, lower operating and maintenance costs, higher systems reliability, increased property value, and improved air quality and comfort.
