

Taking utility-scale development to the next level with accurate and fast Pre-CAD design

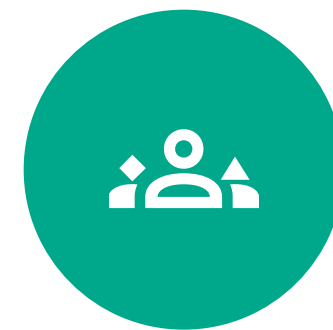

Accurate engineering for non-technical developers

Effortlessly improve design accuracy with NREL's System Advisor Model, Design generation from GIS imports, Design optimization, and Engineering templates.

Live collaboration

Site design is not a one person job. We empower the whole team to spend less time on the wrong design with Live collaboration and Geo-commenting.

"Extra care"

Offers more at a lower price and upholds an average client response time of under one hour.

The problem

The swift expansion of developer team causes lack of engineering expertise and poor collaboration, which are leading to a growing number of inaccurate and unbuildable pre-CAD designs. This has emerged as the largest risk to project success.
