

TECHNICAL ASSISTANCE REQUEST

Do you want to be part of the biggest revolution in science? This is your opportunity.

We are looking for a wide range of experts. Because of the overlaps in science inherent in a fractal model, there are no areas of science where an opportunity to cooperate is not available so we will separate this TAR into those items specific to the solar challenge and those which are general to the science.

How can we be this impactful? Information physics has been around conceptually since 1945, almost as soon as binary programming came into existence, the idea of information as a state of matter also came into existence. But what about space itself? This idea takes information physics into hologram and simulation theory.

What has been missing from simulation theory, and information physics, is an observed bit and a specific model of how the bit operates. Some models, and most religions, explore the concept of a "designed" simulation where one or more programmers generate the simulation. A spontaneously arising simulation should leave clear evidence of its existence.

Our presentation to the APS in October of 2023 will provide that evidence and the specific mathematics and modeling inherent in that model.

Solar 7 TAR

Solar Panel Manufacturing

Business and Sales Expertise

Grant Experts

Fund Raising Experts

Experts from the General TAR

General TAR

Mathematicians, Physicists and Chemists and others with expertise interested in working with new models to address the biggest problems; solar, hydrogen, energy generation, energy storage, space, general chemistry, physics and chemical modeling, astrophysicists, Experts in Nuclear Physics and other specialty areas.

Programming Experts

Engineers interested in manufacturing and deploying new technologies

Geology experts interested in addressing the titanic dangers facing humanity

Grant writing experts

Business Experts including Fundraising Experts
