

Technical Assistance Request

We would appreciate if we can get assistance with the following to help realize our technology:

Testing / Validation

Testing with a well-established organization like National Renewable Energy Laboratory would help us not only test the system but also bring trust and validation to the performance of the system.

Funding / Investment

Raising funds is necessary for commercialization to be able to build the panel at scale and conduct marketing activities to reach customers.

Pilot Sites

Access to early adopters or demonstration sites will be crucial for the technology to progress commercially.
