

# VOLTIC SHIPPING

**Climate Impact:** The maritime industry burns some of the dirtiest fuel on the planet. Alternative power sources in the maritime industry present a unique opportunity to eliminate 2.5% of global CO2 emissions.

**Novel Solar Implementation:** Our patent-pending modular solar apparatus can be adapted to all kinds of vessels. The expanded solar array generates ~490 KW, enough power to move 5 knots for 24 hours a day.

**Business Viability:** Our ships eliminate the largest operating cost for vessels, fuel. This enables us to competitively price our services from day one and generate profits to put back into the business to further promote our mission.
