

Minerva Solar

by Intellectual Assets

**Keeping Costs Low by
Steadying the Pole**

More Land less hassle:

Agrivoltaics means more land to develop and less friction.

Agnostic: Works with any HSAT support system

COST EFFECTIVE: Build at height for the same cost.

COOL: Shade is cool. Good for the soil, good for plants, good for livestock.

THE OPPORTUNITY

A simple, HSAT agnostic method to raise solar over cattleland, opening up vast tracks for development without the friction caused by exclusive use.

THE SOLUTION

Minerva allows the use of lower grade poles with shallower foundations creating a cost neutral solution for agrivoltaics.
