

Growing Community, Food, and Solar Energy

Team: Victor Nino & Elise Couillard

Innovating Farmer-Centered Dual-Use PV Greenhouses

The Problem: Decreasing land availability and carbon-intensive agriculture systems

The Solution: Solar PV Greenhouse systems, that use bifacial panel technology to produce solar energy, and allow for crop-beneficial climate control

The Plan: Development stage: Prototyping
We will be developing and defining our goals around American-Made content sourcing, lowering costs where able, and developing a commercialization plan with local entities
