

# Imagine a world where harvesting electricity is simple, affordable and sustainably sourced and stored

ENERGY FINDERS

**Energy Finders** is pleased to present **Project eBox**, the world's first fully integrated intelligent energy harvesting system. It is comprised of an exterior optical receiver which collects ambient light and a mobile modular unit which processes single cells of light as stored, usable energy. We like to call this process (CBCD) or "cell by cell digitization."

Through eBox's proprietary architecture, lab results showed remarkable energy efficiency levels exceeding 50% in design bed testing. This is a ~110% improvement over the current traditional roof based solar panels.

**Our mission is simple. Harness the full power of the sun and improve the quality of life for millions of Americans, especially those with a disproportionately higher energy burden.**
