What I've done

- Conceptualized and designed the product
- Commissioned an initial prototype
- Secured a partnership to provide recycled materials for manufacturing

Where we need assistance

Prototyping is the first area we need assistance with. We need to finalize the design of the top sheet section, as well as the support frame, and create a rooftop-ready prototype.

Ideally, we would get this prototype installed alongside a solar array to showcase it in action.

When the prototype is complete, we will apply for a patent. We also need to develop a plan for manufacturing at scale.

We need help creating a marketing strategy created to sell the product to EPCs, who can then pitch it as part of their sales presentation to homeowners.

GoGlobal is supporting us through application preparation with an eye toward development, prototyping, commercialization and strategizing a potential future funding pipeline.
