

Technical Assistance Request – Accordion Solar

Accordion Solar is a self-contained solar plant that aims to address the high electricity rates and power challenges faced by communities, particularly native Hawaiians, by providing a quick and efficient solution.

Accordion Solar is a self-contained solar plant that can power 10 to 20 homes in a community and be deployed in less than three hours, with the founders being deeply connected to their Polynesian heritage.

We are bringing Accordion Solar technology to Native and Indigenous communities in Hawaii and the Pacific. Accordion Solar is a low-cost, easy-to-install solar energy system that can provide reliable electricity to homes and businesses in remote areas.

We are committed to working with community members to implement Accordion Solar technology in their communities. I believe that Accordion Solar has the potential to make a real difference in the lives of many people, and I am excited to see the impact that it has.

We have identified some American-Made Connectors and Power Connectors that could help us, but we are currently seeking technical assistance in the following areas:

- System design and engineering
- System installation and maintenance
- Workforce training
- Localized manufacturing

We are also seeking funding and support for community engagement and regulatory compliance.

How you can help:

- Provide technical assistance in one of the areas listed above.
- Connect us with other potential funders and supporters.
- Spread the word about the startup and its mission.

Together, we can make a difference in the lives of people in Native and Indigenous communities in Hawaii and the Pacific.
