

The Problem

There is a **mountain** of solar waste, with **minimal** recycling options.

- Inadequate capacity in US to recycle solar panels.
- Growing mandates to recycle solar panels.
- Rapid growth of solar is resulting in a wave of waste the US is ill-equipped to handle.

The Solution

Build solar panel **recycling** capacity, with **accessible pricing** to all.

- We are building a state-of-the-art solar panel recycling facility that will drive the solar recycling industry from conceptual trials to full commercialization.
- Processed solar panel materials will be sold to our existing network of refiners and manufacturers at rates which will drive recycling costs down to accessible levels.
