Technical Assistance Request:

Solar Product Manufacturers

Although we have a close partnership with Tesla for The Orange-Button Product Registry, collaboration with other manufacturers to supply data related to inverters, modules, and batteries is essential for the pilot's success before the Set! Demo Day. Their support will enable us to populate the Product Registry with actual data, showcasing the tool's significance in facilitating solar deployment.

The Product Registry strives to become a comprehensive resource for accessing valuable information about solar products. This not only translates into time and cost savings but also significantly reduces the time required for the activation of a solar site.

Warranty/Insurance Providers

By leveraging The Orange-Button Product Registry, our objective is to establish industry standards for solar product warranties and insurance. These organizations, which are key stakeholders and end-users of the Product Registry, have a pivotal role in deriving value from this solution. It will enable them to identify opportunities for waste reduction and resource optimization while meeting their business requirements.

Our aim is to ensure that The Orange-Button Product Registry offers a seamless user experience, eliminating any usability issues in users' daily operations. By actively gathering feedback and insights from end-users, we will make necessary refinements and

adjustments to the tool's user interface, facilitating rapid adoption and user satisfaction.

Technology Solution Providers

Our previous project, the AHJ Registry, has earned industry recognition and boasts over 300,000 monthly visitors. We welcome collaborations with technology providers to ensure seamless access to The Orange-Button Product Registry via API. As technology continually evolves, we aim to align with industry best practices, enabling our registry to be built on state-of-the-art technology that requires minimal ongoing adjustments and maintenance.
