U.S. DEPARTMENT OF ENERGY

U.S. DEPARTMENT OF ENERGY

Organization Overview

Team - Solar Unity Innovators

Vision - Transform and energize communities equitably with community solar.

Mission - The team aims to successfully develop two community solar projects, and tangentially create processes and software for making community solar more accessible and replicable across the country. We will engage, inform and gain trust with community partners and stakeholders for maximum benefits.

Project Overview

Project Denver - Actively scoping a roof-top site in Denver, CO. This will be 500 kW-DC, 3rd-party owned project, and will service a disadvantaged community. Aardex has engaged with the landowner regarding site control.

Project Dumas - Actively scoping a rural undeveloped site in Dumas, AR. This will be 500 kW-DC, 3rd-party owned project, and will service a disadvantaged community. Aardex believes site control is likely within the upcoming weeks.

Meaningful Benefits

Our Denver and Dumas Community Solar Projects will grant Low-to-Moderate Income (LMI) households significant savings through access to solar energy, and ensure uninterrupted energy supply with enhanced community resilience and grid stability. Solar Unity Innovators is committed to fostering equitable workforce development, creating job opportunities and empowering individuals within our communities. Through these initiatives, we are not only transforming energy accessibility but also building sustainable and inclusive futures for all residents.
