

Community Power Accelerator Prize

Team Name:	New Mexicans for access to clean & affordable solar
City and State:	Albuquerque, NM
Submission Title:	Expand access to low income New Mexicans

Organization Overview

- Prosperity Works is a non-profit that serves the entire state of New Mexico to help New Mexicans build economic prosperity. We do this through both building and protecting assets. Our community solar work supports households in building financial assets through meaningful bill savings. We combine community solar with comprehensive energy efficiency upgrades to further lower the energy burden of households.*

Project Overview

- Prosperity Works has two 5 MH projects that are on New Mexico's waitlist. Each project is located within a disadvantaged area and can recruit subscribers anywhere within the PNM service territory. We have an experienced developer partner with signed letter agreements for them to finance development costs and to transfer key project development information.*

Meaningful Benefits

- Our projects have a 29% monthly bill credit for low-income qualified households. We've made a commitment to having half of the kWh allocation go to low-income eligible households and organizations. We have meaningful connections with the state's largest community college to provide workforce training to New Mexico's new community solar field.*
