

ZenniHome is on a mission to produce the highest quality and attainable FASST housing globally.*

**Factory- built, Advance tech, Sustainable, Stackable, Transportable*

ZenniHome's factory in Page, Arizona that was productively transitioned from a decommissioned coal plant on Navajo land.

We are thrilled to re-employ and up-skill the local community and have them as part of our team.

ZenniHome is committed to sustainability, as is reflected in our choice of materials. We build our homes mostly from recycled steel, which not only reduces our environmental impact but also enables us to build with remarkable precision and strength (stacking 5 high without external support).
